
CockpitCUBE® DEMO

Read-Me-First

Your CockpitCUBE® V2.0 Demo is a fully functional copy of CockpitCUBE® V2.0 including all available modules. Every time you launch the application you'll be reminded of the Demo period left.

Install CockpitCUBE® V2.0 Demo as you would install the full release. To do so properly, follow the instructions included in the **CockpitCUBE® Essentials V2.0 XP** or **Vista Installation Procedure** manuals.

CockpitCUBE® V2.0 Demo can be used for a number of allotted days and/or for a number of allotted startups, whichever comes first.

You can use CockpitCUBE® V2.0 Demo for **15 days** and/or **50 startups**, since the Security Dongle you received by courier is licensed. The licensing of the Security Dongle is done by the CockpitCUBE® V2.0 Web Installer when it prompts you to enter and submit the License Pin code you received in your Order Confirmation e-mail. Make sure you have all the equipment you need to test CockpitCUBE® ready before installing the application.

After **15 days** and/or **50 startups**, whichever comes first, the Demo period expires and CockpitCUBE® V2.0 ceases to work. At this point you can easily proceed to purchase the commercial version: you only need to re-license the Security Dongle already in your possession – without the need to re-install the application.

If you do not intend to purchase the commercial version, you may uninstall CockpitCUBE® V2.0 and all its modules from your computer.

If you buy the commercial version before the Demo period has expired, you can clear the Security Dongle from the CockpitCUBE® V2.0 Configuration page and immediately re-license the Dongle by launching the CockpitCUBE® V2.0 Web Installer.

WARNING: the Security Dongle has its own internal date counter; resetting the computer's date after the Security Dongle has been licensed may cause the Demo period to expire immediately.

NOTE: before moving the Security Dongle to a different computer, make sure both computers' internal dates are matching.
